

# CD405xB CMOS Single 8-Channel Analog Multiplexer or Demultiplexer With Logic-Level Conversion

## 1 Features

- Wide range of digital and analog signal levels:
  - Digital: 3 V to 20 V
  - Analog:  $\leq 20 \text{ V}_{\text{P-P}}$
- Low ON resistance,  $125 \Omega$  (typical) over 15  $\text{V}_{\text{P-P}}$  signal input range for  $V_{\text{DD}} - V_{\text{EE}} = 18 \text{ V}$
- High OFF resistance, channel leakage of  $\pm 100 \text{ pA}$  (typical) at  $V_{\text{DD}} - V_{\text{EE}} = 18 \text{ V}$
- Logic-level conversion for digital addressing signals of 3 V to 20 V ( $V_{\text{DD}} - V_{\text{SS}} = 3 \text{ V}$  to 20 V) to switch analog signals to 20  $\text{V}_{\text{P-P}}$  ( $V_{\text{DD}} - V_{\text{EE}} = 20 \text{ V}$ ) matched switch characteristics,  $r_{\text{ON}} = 5 \Omega$  (typical) for  $V_{\text{DD}} - V_{\text{EE}} = 15 \text{ V}$  very low quiescent power dissipation under all digital-control input and supply conditions,  $0.2 \mu\text{W}$  (typical) at  $V_{\text{DD}} - V_{\text{SS}} = V_{\text{DD}} - V_{\text{EE}} = 10 \text{ V}$
- Binary address decoding on chip
- 5 V, 10 V, and 15 V parametric ratings
- 100% tested for quiescent current at 20 V
- Maximum input current of  $1 \mu\text{A}$  at 18 V over full package temperature range,  $100 \text{ nA}$  at 18 V and  $25^\circ\text{C}$
- Break-before-make switching eliminates channel overlap

## 2 Applications

- Analog and digital multiplexing and demultiplexing
- Analog to digital and digital to analog conversion
- Signal gating
- Factory automation**
- Televisions**
- Appliances**
- Consumer audio**
- Programmable logic circuits
- Sensors**

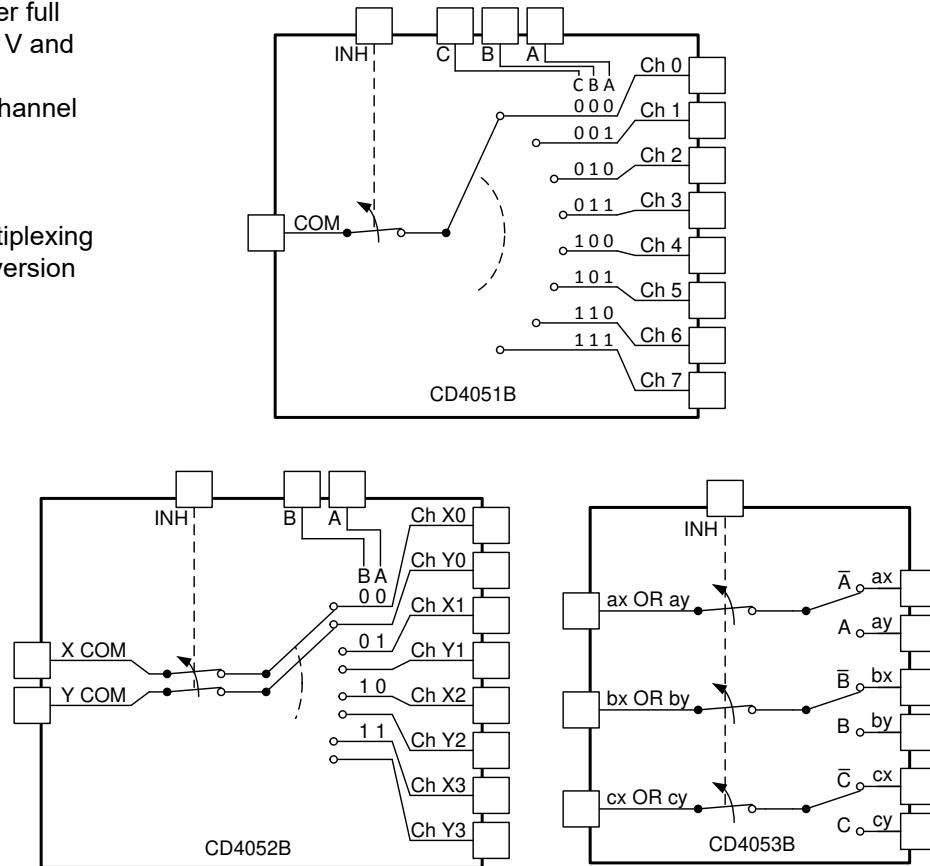

## 3 Description

The CD405xB analog multiplexers and demultiplexers are digitally-controlled analog switches having low ON impedance and very low OFF leakage current. These multiplexer circuits dissipate extremely low quiescent power over the full  $V_{\text{DD}} - V_{\text{SS}}$  and  $V_{\text{DD}} - V_{\text{EE}}$  supply-voltage ranges, independent of the logic state of the control signals.

### Package Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
CD405xB	J (CDIP, 16)	19.50 mm $\times$ 6.92 mm
	N (PDIP, 16)	19.30 mm $\times$ 6.35 mm
	D (SOIC, 16)	9.90 mm $\times$ 3.91 mm
	NS (SOP, 16)	10.30 mm $\times$ 5.30 mm
	PW (TSSOP, 16)	5.00 mm $\times$ 4.40 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Functional Diagrams of CD405xB

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from Revision J (February 2023) to Revision K (March 2023)

	Page
• Added PW package information throughout the data sheet.....	<b>1</b>

### Changes from Revision I (September 2017) to Revision J (February 2023)

	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	<b>1</b>
• Updated the <i>Quiescent Device Current, IDD Max</i> typical and maximum values.....	<b>5</b>
• Updated the <i>OFF Channel Leakage Current: Any Channel OFF (Max) or ALL Channels OFF (Common OUT/IN) (Max)</i> typical values.....	<b>5</b>
• Updated the <i>ON Channel Leakage Current: Any Channel ON (Max) or ALL Channels ON (Common OUT/IN) (Max)</i> maximum values.....	<b>5</b>
• Updated the <i>Input Low Voltage, VIL, Max</i> values.....	<b>5</b>
• Updated the <i>Input Current, IIN (Max)</i> typical values.....	<b>5</b>
• Updated the <i>Inhibit-to-Signal OUT (Channel Turning OFF)</i> typical values.....	<b>5</b>
• Updated the values in the <i>ESD Ratings</i> section.....	<b>5</b>
• Updated the <i>Typical Characteristics</i> section.....	<b>16</b>

### Changes from Revision H (April 2015) to Revision I (September 2017)

	Page
• Added the <i>On Channel Leakage Current – Any Channel On</i> figure.....	<b>16</b>

### Changes from Revision G (October 2003) to Revision H (April 2015)

	Page
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	<b>1</b>
• Added <i>Device Information</i> table.....	<b>1</b>

(1) I = input, O = output

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup> <sup>(2)</sup>

			MIN	MAX	UNIT
	Supply Voltage	V+ to V-, Voltages Referenced to V <sub>SS</sub> Terminal	-0.5	20	V
	DC Input Voltage		-0.5	V <sub>DD</sub> +0.5	V
	DC Input Current	Any One Input	-10	10	mA
T <sub>JMAX1</sub>	Maximum junction temperature, ceramic package			175	°C
T <sub>JMAX2</sub>	Maximum junction temperature, plastic package			150	°C
T <sub>stg</sub>	Storage temperature		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.

### 6.2 ESD Ratings

			VALUE	UNIT
CD4051B in PDIP, CDIP, SOIC, and SOP Packages				
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±3000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±2000	
CD4053B in PDIP, CDIP and SOP Packages				
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2500	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1500	
CD4051B and CD4053B in TSSOP Package				
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
Temperature Range		-55		125	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		CD405x				UNIT
		E (PDIP)	M (SOIC)	NS (SOP)	PW (TSSOP)	
		16 PINS	16 PINS	16 PINS	16 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	67	73	64	116.5	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

## 6.5 Electrical Characteristics – TSSOP Package

Over operating free-air temperature range,  $V_{SUPPLY} = \pm 5$  V, and  $R_L = 100 \Omega$ , (unless otherwise noted)<sup>(1)</sup>

PARAMETER	TEST CONDITIONS					MIN	TYP	MAX	UNIT
	$V_{IS}$ (V)	$V_{EE}$ (V)	$V_{SS}$ (V)	$V_{DD}$ (V)	TEMP				
<b>Signal Inputs (<math>V_{IS}</math>) and Outputs (<math>V_{OS}</math>) – TSSOP Package</b>									
Quiescent Device Current, $I_{DD}$ (Max)	0 V	0 V	5 V		-55°C			60	μA
					-40°C			60	
					25°C	17	60

					125°C		$\pm 1$		
Propagation Delay Time	Address-to-Signal OUT (Channels ON or OFF) (See Figure 7-2 Figure 7-3, and Figure 7-8)	$t_r, t_f = 20$ ns, $C_L = 50$ pF, $R_L = 10$ k $\Omega$	0 V	0 V	5 V		450	720	ns
			0 V	0 V	10 V		160	320	
			0 V	0 V	15 V		120	240	
			-5 V	0 V	5 V		225	450	

## 6.5 Electrical Characteristics – TSSOP Package (continued)

Over operating free-air temperature range,  $V_{SUPPLY} = \pm 5$  V, and  $R_L = 100 \Omega$ , (unless otherwise noted)<sup>(1)</sup>

PARAMETER		TEST CONDITIONS					MIN	TYP	MAX	UNIT
Propagation Delay Time	Inhibit-to-Signal OUT (Channel Turning ON) (See Figure 7-3)	$t_r, t_f = 20$ ns, $C_L = 50$ pF, $R_L = 1$ kΩ	0 V	0 V	5 V		400	720		ns
			0 V	0 V	10 V		160	320		
			0 V	0 V	15 V		120	240		
			-10 V	0 V	5 V		200	400		
Propagation Delay Time	Inhibit-to-Signal OUT (Channel Turning OFF) (See Figure 7-10)	$t_r, t_f = 20$ ns, $C_L = 50$ pF, $R_L = 10$ kΩ	0 V	0 V	5 V		200	450		ns
			0 V	0 V	10 V		90	210		
			0 V	0 V	15 V		70	160		
			-10 V	0 V	5 V		130	300		
Input Capacitance, $C_{IN}$ (Any Address or Inhibit Input)		-5 V	0 V	5 V	25°C		5	7.5	pF	

(1) Peak-to-Peak voltage symmetrical about  $(V_{DD} - V_{EE}) / 2$ .

(2) Determined by minimum feasible leakage measurement for automatic testing.

## 6.6 AC Performance Characteristics – TSSOP Package

$V_{DD} = +15 \text{ V}$ ,  $V_{SS} = V_{EE} = 0 \text{ V}$ ,  
 $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS				TYP	UNIT	
	$V_{IS} (\text{V})$	$V_{DD} (\text{V})$	$R_L (\text{k}\Omega)$				
Cutoff (-3 dB) Frequency Channel ON (Sine Wave Input)	5 <sup>(1)</sup>	10	1	$V_{OS}$ at Common OUT/IN	CD4053	30	
		10	1		CD4052	25	
		10	1		CD4051	20	
	$V_{EE} = V_{SS}$ , $20\log(V_{OS}/V_{IS}) = -3 \text{ dB}$			$V_{OS}$ at Any Channel		60	
Total Harmonic Distortion, THD	2 <sup>(1)</sup>	5	10			0.3%	
	3 <sup>(1)</sup>	10	10			0.2%	
	5 <sup>(1)</sup>	15	10			0.12%	
	$V_{EE} = V_{SS}$ , $f_{IS} = 1 \text{ kHz}$ Sine Wave						
-40 dB Feed-through Frequency (All Channels OFF)	5 <sup>(1)</sup>	10	1	$V_{OS}$ at Common OUT/IN	CD4053	8	
					CD4052	10	
					CD4051	12	
					$V_{OS}$ at Any Channel	8	
-40 dB Signal Crosstalk Frequency	5 <sup>(1)</sup>	10	1	Between Sections, CD4052 Only		3	
					Measured on Common	6	
					Measured on Any Channel	10	
					Between Any Two Sections, CD4053 Only	2.5	
Address-or-Inhibit-to- Signal Crosstalk		10	10 <sup>(2)</sup>		In Pin 2, Out Pin 14	6	
		$V_{EE} = 0$ , $V_{SS} = 0$ , $t_r$ , $t_f = 20 \text{ ns}$ , mVPEAK $V_{CC} = V_{DD} - V_{SS}$ (Square Wave)			In Pin 15, Out Pin 14	6	
						65 mVPEAK	
						65 mVPEAK	

(1) Peak-to-Peak voltage symmetrical about  $(V_{DD} - V_{EE}) / 2$ .

(2) Both ends of channel.

## 6.7 Electrical Characteristics – CDIP, PDIP, SOIC and SOP Packages

Over operating free-air temperature range,  $V_{SUPPLY} = \pm 5$  V, and  $R_L = 100 \Omega$ , (unless otherwise noted)<sup>(1)</sup>

PARAMETER	TEST CONDITIONS					MIN	TYP	MAX	UNIT				
	$V_{IS}$ (V)	$V_{EE}$ (V)	$V_{SS}$ (V)	$V_{DD}$ (V)	TEMP								
<b>Signal Inputs (<math>V_{IS}</math>) and Outputs (<math>V_{OS}</math>) – CDIP, PDIP, SOIC and SOP Packages</b>

**Special Considerations:** In applications where separate power sources are used to drive  $V_{DD}$  and the signal inputs, the  $V_{DD}$  current capability should exceed  $V_{DD}/R_L$  ( $R_L$  = effective external load). This provision avoids permanent current flow or clamp action on the  $V_{DD}$  supply when power is applied or removed from the CD4051B, CD4052B or CD4053B.

## 8 Detailed Description

### 8.1 Overview

The CD4051B, CD4052B, and CD4053B analog multiplexers are digitally-controlled analog switches having low ON impedance and very low OFF leakage current. Control of analog signals up to 20 V<sub>P-P</sub> can be achieved by digital signal amplitudes of 4.5 V to 20 V (if V<sub>DD</sub> – V<sub>SS</sub> = 3 V, a V<sub>DD</sub> – V<sub>EE</sub> of up to 13 V can be controlled; for V<sub>DD</sub> – V<sub>EE</sub> level differences above 13 V, a V<sub>DD</sub> – V<sub>SS</sub> of at least 4.5 V is required). For example, if V<sub>DD</sub> = +4.5 V, V<sub>SS</sub> = 0 V, and V<sub>EE</sub> = –13.5 V, analog signals from –13.5 V to +4.5 V can be controlled by digital inputs of 0 V to 5 V. These multiplexer circuits dissipate extremely low quiescent power over the full V<sub>DD</sub> – V<sub>SS</sub> and V<sub>DD</sub> – V<sub>EE</sub> supply-voltage ranges, independent of the logic state of the control signals. When a logic 1 is present at the inhibit input terminal, all channels are off.

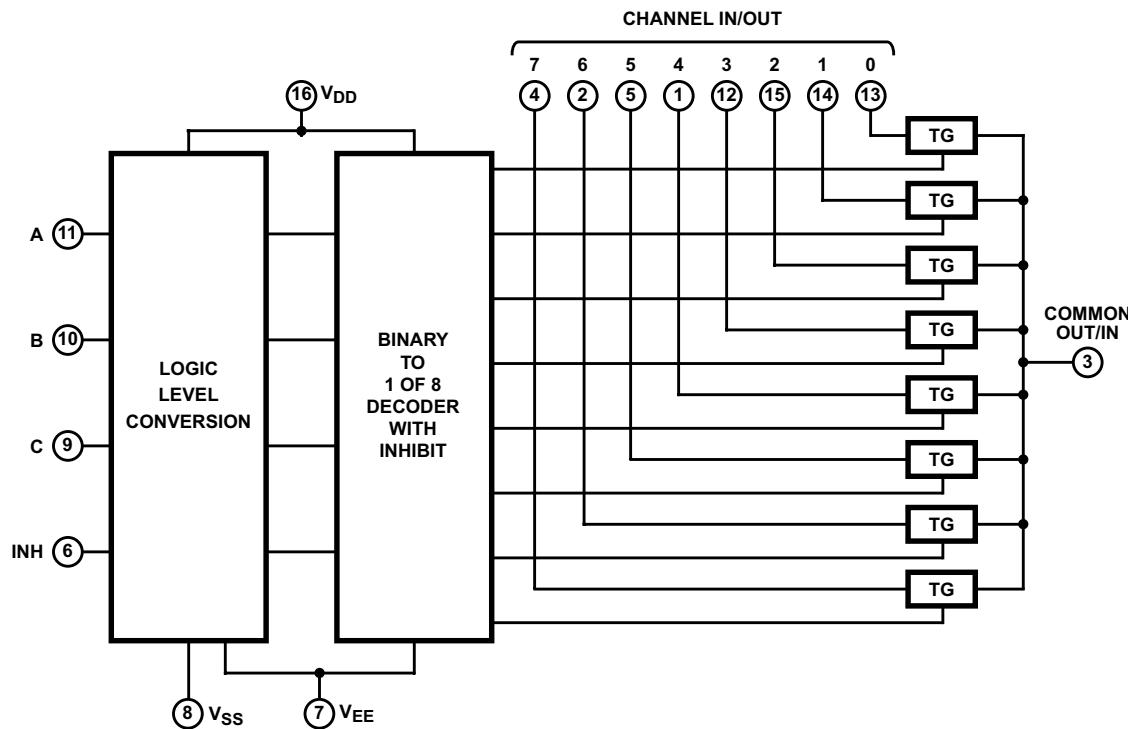

The CD4051B device is a single 8-channel multiplexer having three binary control inputs, A, B, and C, and an inhibit input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

The CD4052B device is a differential 4-channel multiplexer having two binary control inputs, A and B, and an inhibit input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The CD4053B device is a triple 2-channel multiplexer having three separate digital control inputs, A, B, and C, and an inhibit input. Each control input selects one of a pair of channels which are connected in a single-pole, double-throw configuration.

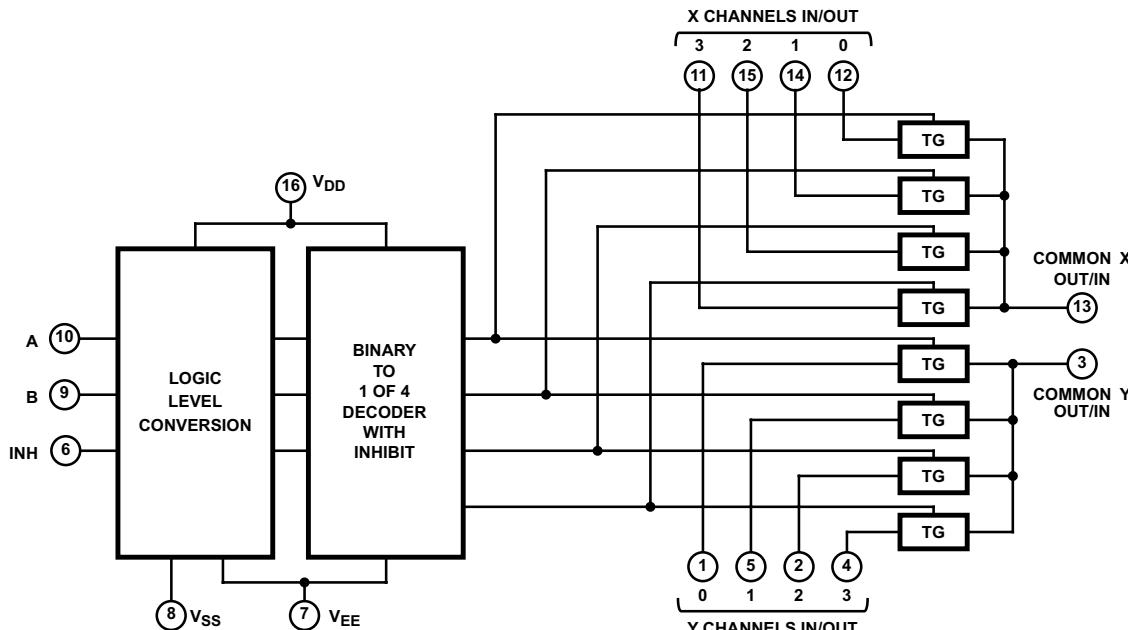

When these devices are used as demultiplexers, the CHANNEL IN/OUT terminals are the outputs and the COMMON OUT/IN terminals are the inputs.

## 8.2 Functional Block Diagrams

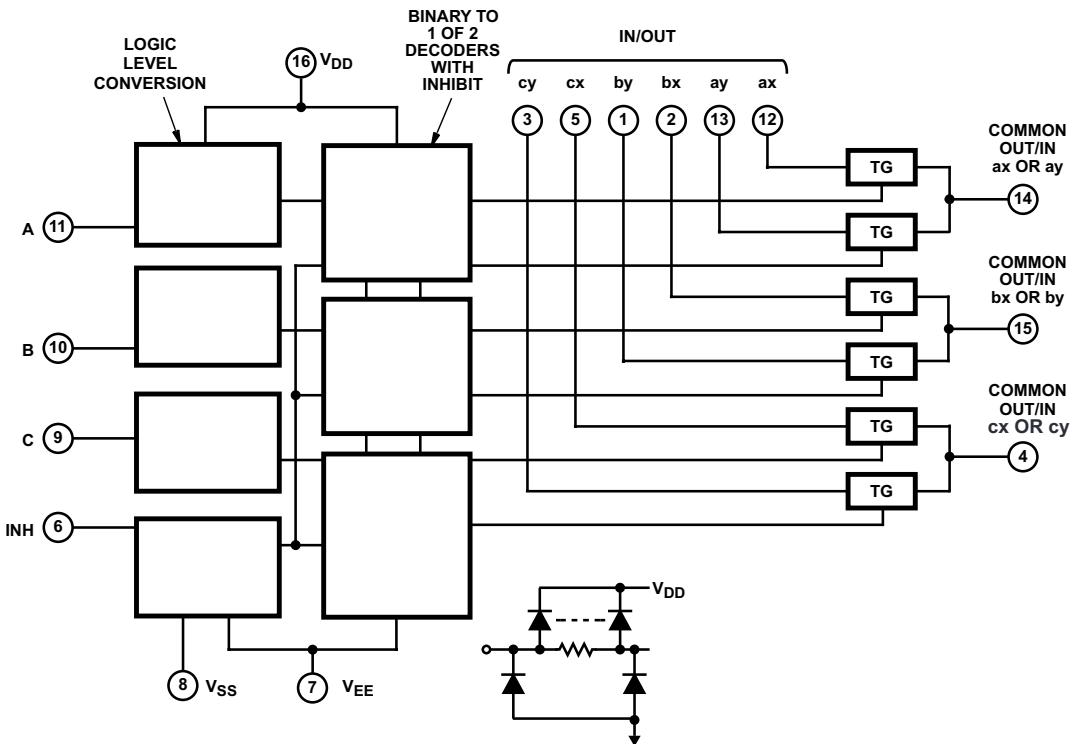

All inputs are protected by standard CMOS protection network.

**Figure 8-1. Functional Block Diagram, CD4051B**

All inputs are protected by standard CMOS protection network.

**Figure 8-2. Functional Block Diagram, CD4052B**

All inputs are protected by standard CMOS protection network.

**Figure 8-3. Functional Block Diagram, CD4053B**

### 8.3 Feature Description

The CD405xB line of multiplexers and demultiplexers can accept a wide range of digital and analog signal levels. Digital signals range from 3 V to 20 V, and analog signals are accepted at levels  $\leq 20$  V. The devices have low ON resistance, typically  $125\ \Omega$  over 15 V<sub>P-P</sub> signal input range for  $V_{DD} - V_{EE} = 18$  V. This feature allows for very little signal loss through the switch. Matched switch characteristics are typically  $r_{ON} = 5\ \Omega$  for  $V_{DD} - V_{EE} = 15$  V.

The CD405xB devices also have high OFF resistance, which keeps from wasting power when the switch is in the OFF position, with typical channel leakage of  $\pm 100\ pA$  at  $V_{DD} - V_{EE} = 18$  V. Very low quiescent power dissipation under all digital-control input and supply conditions, typically 0.2  $\mu W$  at  $V_{DD} - V_{SS} = V_{DD} - V_{EE} = 10$  V keeps power consumption total very low. All devices have been 100% tested for quiescent current at 20 V with maximum input current of 1  $\mu A$  at 18 V over the full package temperature range, and only 100 nA at 18 V and 25°C.

Logic-level conversion for digital addressing signals of 3 V to 20 V ( $V_{DD} - V_{SS} = 3$  V to 20 V) to switch analog signals to 20 V<sub>P-P</sub> ( $V_{DD} - V_{EE} = 20$  V). Binary address decoding on chip makes channel selection easy. When channels are changed, a break-before-make system eliminates channel overlap.

## 9 Application and Implementation

### Note

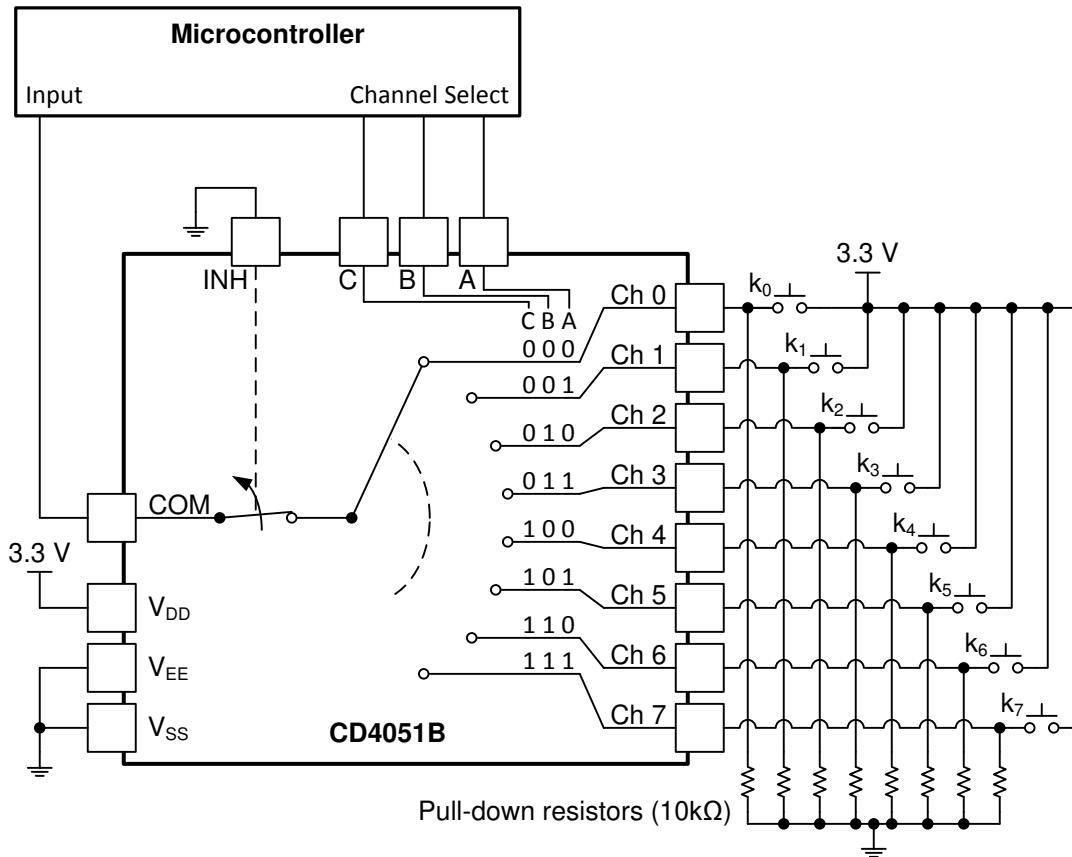

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 9.1 Application Information

The CD405xB multiplexers and demultiplexers can be used for a wide variety of applications.

### 9.2 Typical Application

One application of the CD4051B is to use it in conjunction with a microcontroller to poll a keypad. [Figure 9-1](#) shows the basic schematic for such a polling system. The microcontroller uses the channel select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This application is a very robust setup, allowing for multiple simultaneous key-presses with very little power consumption. This setup also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must continually scan the keys for a press and can do little else during this process.

**Figure 9-1. The CD4051B Being Used to Help Read Button Presses on a Keypad.**

#### 9.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions should be considered to prevent ringing.

### 9.2.2 Detailed Design Procedure

1. Recommended Input Conditions:
  - For switch time specifications, see propagation delay times in [Electrical Characteristics](#).
  - Inputs should not be pushed more than 0.5 V above  $V_{DD}$  or below  $V_{EE}$ .
  - For input voltage level specifications for control inputs, see  $V_{IH}$  and  $V_{IL}$  in [Electrical Characteristics](#).
2. Recommended Output Conditions:
  - Outputs should not be pulled above  $V_{DD}$  or below  $V_{EE}$ .
3. Input or output current consideration:
  - The CD405xB series of parts do not have internal current drive circuitry and thus cannot sink or source current. Any current will be passed through the device.

### 9.2.3 Application Curve

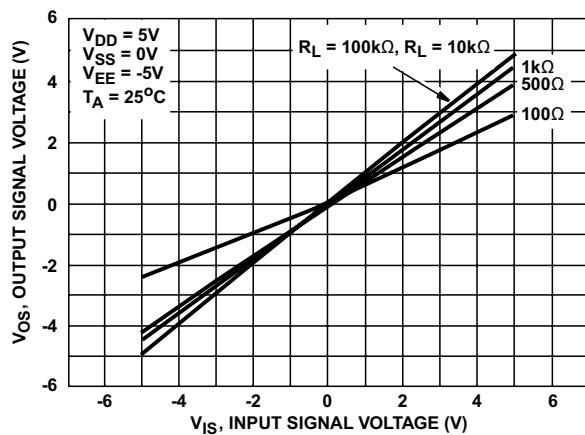

Figure 9-2. ON Characteristics for 1 of 8 Channels (CD4051B)

## 9.3 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Electrical Characteristics](#).

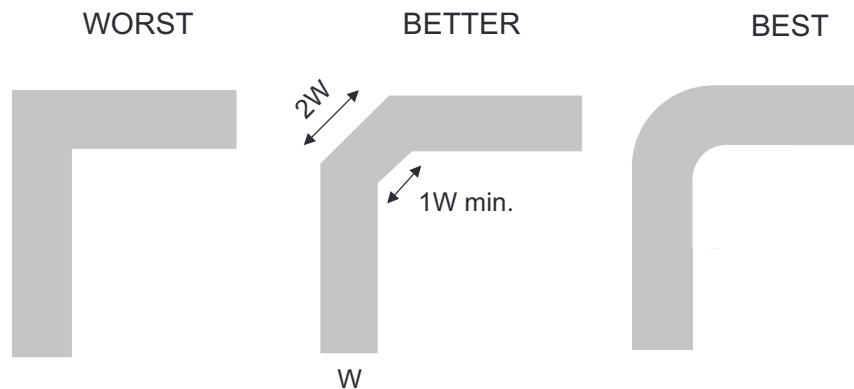

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a  $0.1\text{-}\mu\text{F}$  bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a  $0.01\text{-}\mu\text{F}$  or  $0.022\text{-}\mu\text{F}$  capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a  $0.1\text{-}\mu\text{F}$  bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise.  $0.1\text{-}\mu\text{F}$  and  $1\text{-}\mu\text{F}$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 9.4 Layout

### 9.4.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a  $90^\circ$  angle, a reflection can occur. This reflection is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. [Figure 9-3](#) shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

#### 9.4.2 Layout Example

**Figure 9-3. Trace Example**

## 10 Device and Documentation Support

### 10.1 Documentation Support

#### 10.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, *Implications of Slow or Floating CMOS Inputs*

### 10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 10.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 10.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 10.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(<sup>1</sup>) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(<sup>2</sup>) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS-T09B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(<sup>3</sup>) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(<sup>4</sup>) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(<sup>5</sup>) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(<sup>6</sup>) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
