YAMAHA Single-Axis Robots

TS TRANSERVO

Stepping Servo (SS04 / SSC04 / SS05 / SSC05 / SS05H / SSC05H)

The TRANSERVO by YAMAHA !
Stepping motor single-axis robots
that break all the old rules !

The TRANSERVO – Don't you know about it yet?

Thanks for taking the time to check out our catalog!

You are probably using single-axis robots for all kinds of applications with functions like positioning and push aren't you? Well, the TRANSERVO is a new type of compact single-axis robot that combines the best features of stepping motors and servomotors.

In recent years, automated machinery is being subjected to ever tougher demands in terms of specifications, costs, and deadlines of delivery, which call for nearly superhuman efforts from designers.

Well the TRANSERVO will prove the answer to all those design problems.

1 New control method combines the best features of servo and stepping motors!

Stepping motors have great features such as a low cost and no tiny vibrations while stopped. Yet they also have drawbacks such as a drastic drop in torque at high speeds and heavy current consumption while stopped.

The TRANSERVO by YAMAHA eliminates all these problems by adopting an innovative vector control method. In effect, the TRANSERVO delivers the same functions and low cost of a servomotor while using a stepping motor.

● High-speed operation slashes production time!

TRANSERVO moves even a heavy workpiece quickly because the payload is constant up to its maximum speed. On ordinary equipment, with conventional control the upper model has to be selected to match the high-speed range, but now one model can do it all!

Ordinary type

Payload — Must use only small payloads during high speeds

Speed (mm/s): 0 200 400 600 800

TRANSERVO

Payload — Payload is always constant!

Speed (mm/s): 0 200 400 600 800

● Energy saver! Perfect stop!

Control is basically the same as a servomotor so power consumption is kept to a minimum, which saves energy and helps cut down on CO_2 emissions. Also perfect stop can be achieved as the same as with ordinary stepping motors so choose this setting if needed.

● Quiet operation – Just like a servo motor!

Robots using ordinary stepping motors have a characteristic "shrill" or high-pitched noise during operation. TRANSERVO operation, however, is extremely quiet, just like a servo motor!

Stepping motor
○ • Simple design & low cost
  • No vibration while stopped

Servo Motors
○ • Movement is smooth
  • Constant torque at all speed range

Combines the best features of both types!

✗ • high-pitched operating noise
  • drop in torque at high-speed

✗ • Tiny vibrations while stopped
  • Cost is high

2 Environmentally rugged resolver provides closed loop control

Of course "no step-out". The resolver used here for detecting the motor position is the same well-known and reliable resolver as used in our high-level robots. It offers stable position detection even in harsh environments containing dust or oil, etc. Moreover, it boasts a high resolving power of 20480 pulses per rotation.

Resolver

The resolver is a magnetic position detector. Its structure is simple with no electronic component and no optical elements. One great feature compared to ordinary optical encoders is that there are very few points where a failure might occur.

Vast quantities of resolvers are used in fields like aviation and the automobile industry where reliability is essential and also because they are highly tough in harsh environments with a low failure rate.

3 Ideal 4-line circular-groove 2-point contact guide gives longen service life

A newly developed module guide is employed, and a 4-line circular-groove 2-point contact guide, which has been used for high-level models, was built into a body that is just as compact as the previous models.

Guide maintains a satisfactory rolling movement with minimal ball differential slip, even if a large momentum load is applied or the installation surface accuracy (flatness) is bad. Rugged design ensures that breakdowns from problems like abnormal wear will seldom occur.
2-line gothic-arch-groove 4-point contact guide

4-line circular-arc-groove 2-point contact guide

▶ **Ordinary model**

Large differential slip tends to occur when a large momentum load is applied or installation surface accuracy is poor.
▶ **TRANSERVO**

Utilizes a circular-arc-groove 2-point contact guide. Ball differential slip (spin) is minimal.

TRANSERVO Series Lineup

A maximum stroke up to 800mm. High lead types are also available on the SS05/SS05H for unmatchable speed!

Model	Lead (mm)	Payload (kg) Horizontal	Payload (kg) Vertical	Stroke (mm) and maximum speed (mm/s) 50	100	150	200	250	300	350	400	450	500	550	600	650	700	750	800

Model: KCA-M4966-00
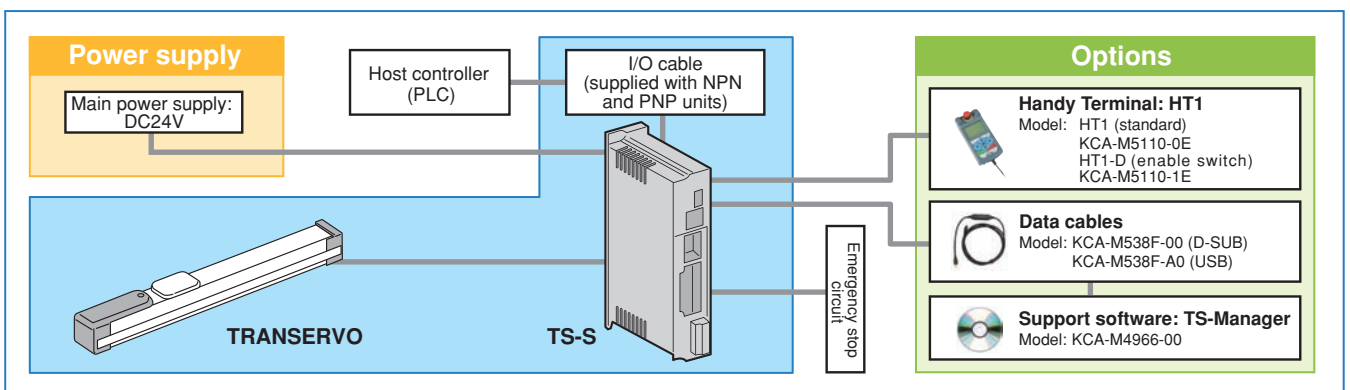

Dedicated Robot Positioner TS-S

TS-S is a positioner type controller that only performs point trace. No program is needed. Operation is simple. After setting point data, specify the point number and enter a START signal a from host controller such as a PLC. Positioning or pushing operation then begins.

Main operation patterns

Normal operation

ABS (absolute) operation

Moves to a specified coordinate position.

Moves to the target position relative to the origin point and completes positioning.

INC (incremental) operation

Moves a specified distance from the current position

Moves from the current position just by a distance specified in point data and completes positioning.

Pushing operation

Pushes at a fixed thrust

Moves while pushing at a preset push force.

Pushing after decelerating

Decelerates and then pushes

Pushing starts after decelerating at a distance equal to "Near width (N)" from the target position.

Merge operation

Merge operation

Changes speed with no deceleration

Moves to multiple points in succession. If different speeds were set, then the speeds are changed without decelerating and stopping to continue point-to-point operation.

Output pattern

Zone output

Output turns ON when a specified zone is entered

Zone for external I/O output can be set for each point.

"Near width" output

Specify position margin zone.

"Near width" output zone can be set for each point as a position margin zone where "positioning complete" signal is to be output.

TS series main functions

Detailed data can be set for each point

Settings such as acceleration, deceleration, zone output range, and position margin zone can be set for each point. Different operations can be easily specified by combining these settings with the above operation patterns.

Setting items

Setting item		Description
1	Run type	Specifies operation pattern such as ABS, INC, positioning, push, and point-to-point link.
2	Position	Specifies position or distance to move.
3	Speed	Specifies maximum speed during operation.
4	Accel.	Specifies acceleration during operation.
5	Decel.	Specifies deceleration during operation (Percentage of acceleration)
6	Push	Specifies motor current limitation during pushing operation.
7	Zone (-)	Specifies upper and lower limits of "personal zone" for
8	Zone (+)	each point data.
9	Near width	Specifies position margin zone where "near width" output should turn on.
10	Jump	Specifies next movement destination after positioning or linked destination for point-to-point operation.
11	Flag	Specifies stop mode and others.

Note: Acceleration and deceleration can be set in easy-to-understand percentage (%) units (standard setup) or in SI units (custom setup) which make it easy to calculate the cycle time.

Maximum acceleration auto setting

Acceleration is a critical parameter that determines how long the robot can continue operating (or service life). In worst cases, setting the acceleration too high may cause the robot to breakdown after a short time.
On the TS series, the maximum acceleration is finely set by taking into account the service life span of the motor output and the guide for each robot model and payload. This eliminates any worry about setting the acceleration too high by mistake.

Full range of monitor functions

The TS-Manager software was developed exclusively for the TS series. Besides data write and edit, data backup, and parameter settings, it has a cycle time simulator and various types of monitor functions.

A run distance monitor is also included as a standard feature, which helps determine maintenance schedules. Design stresses easy use and friendly operation.

Main monitor displays
· Position   · Speed
· Current   · Load factor
· Voltage   · Temperature
· Input information
· Output information
Supports various field networks

Select from the following I/O types to match the host controller specifications. All hardware is built into the positioner unit so cabling and wire hookups are easy.

Item	Description
NPN	Input: 16 points, 24VDC ± 10%, 5.1mA/point, positive common
	Output: 16 points, 24VDC ± 10%, 50mA/point, sink type
PNP	Input: 16 points, 24VDC ± 10%, 5.1mA/point, negative common
	Output: 16 points, 24VDC ± 10%, 50mA/point, source type
CC-Link	Supports CC-Link Ver. 1.10, remote device station (1 station)
DeviceNet	DeviceNet slave node

Connection to Peripheral Units

Input signal

Signal name	Meaning	Description
PIN0 to PIN7	Point number selection	• Point number used to perform positioning operation • Point number to teach current position
JOG+	Jog (+)	Jogs in plus (+) direction when ON.
JOG-	Jog (-)	Jogs in plus (-) direction when ON.
MANUAL	Manual mode	ON: manual mode
ORG	Return-to-origin	Starts return-to-origin.
/LOCK	Interlock	ON: Movement possible, OFF: Movement impossible
START	Start	Starts moving to position specified by point number.
TEACH	Teach	Teaches current position to specified point number.
RESET	Reset	• Resets alarm. • Resets point number output. • Clears remaining distance in relative positioning operation.
SERVO	Servo ON	ON: Servo ON, OFF: Servo OFF

Output signal

Signal name	Meaning	Description
POUT0 to POUT7	Point number selection	• Point number used to perform positioning operation • Alarm number when alarm has occurred
OUT0 OUT1 OUT2 OUT3	Control output 0 Control output 1 Control output 2 Control output 3	Allocate the following outputs to OUT0 to OUT3. • Zone output • Personal zone output • Manual mode status • Return-to-origin status • Near width output • Movement-in-progress output • Push status • Warning output
ZONE	Zone output	Turns ON while at the zone specified by parameter.
PZONE	Personal zone output	Turns ON while at the zone specified by point setting.
MANU-S	Manual mode status	Turns ON when in manual mode.
ORG-S	Return-to-origin status	Turns ON when return-to-origin is complete.
TLM-S	Push status	Turns ON during push in pushing operation.
/WARN	Warning output	Turns ON when warning is issued.
NEAR	Near width output	Turns ON when near width (position margin zone) is entered.
MOVE	Movement in progress	Turns on during movement.
BUSY	Operation in progress	Outputs ON during operation.
END	Operation complete	Outputs operation result. Turns ON when operation has ended normally.
/ALM	Alarm	Turns ON when operation is normal. Turns OFF when alarm has occurred.
SRV-S	Servo status	Outputs ON at servo-on.

TS Series Options (for all TS series models)

TS-S **TS-X** **TS-P**

Handy Terminal: HT1

Has graphic LCD display with backlight for easy viewing.
Model:
● HT1 (standard) KCA-M5110-0E
● HT1-D (enable switch) KCA-M5110-1E

TS-Manager (support software)

Besides data writing, editing and backup functions, the TS-Manager also offers cycle time simulation and various types of monitor functions.

Model: KCA-M4966-00

Data cables

TS-Manager data cable Select from USB cable or D-sub cable.

Model: KCA-M538F-00 (D-sub)
KCA-M538F-A0 (USB)

I/O cables (for maintenance tasks)

NPN or PNP I/O cables Color-coded flat cables. Lattice type, 20 conductors × 2, total length 2 meters, one end unterminated.
(This cable is supplied with NPN and PNP units)

Model: KCA-M4421-20

TRANSERVO robot cable (flexible cable) (Cable specifically designed to connect TS-S to SS04/SS05/SS05H/SSC04/SSC05/SSC05H)

Cable length selectable (1m / 3m / 5m / 10m)
[To controller]
[To robot]
Model: KCK-M4751-10 (1m)
KCK-M4751-30 (3m)
KCK-M4751-50 (5m)
KCK-M4751-A0 (10m)

Note: The standard units of the TRANSERVO series robots and positioners are CE compliant.

Speed setting	–												93%	83%	73%	63%

Note 1. Stop positions are determined by the mechanical stoppers at both ends.
Note 2. Secure the cable with a tie-band 100mm or less from unit's end face to prevent the cable from being subjected to excessive loads.
Note 3. The cable's minimum bend radius is R30.
Note 4. These are the weights without a brake. The weights are 0.2kg heavier when equipped with a brake.
Note 5. When the stroke is longer than 650mm, the ball screw may resonate depending on the moving range (critical speed). In that case, adjust to reduce the speed on the program by referring to the maximum speeds shown in the table at the left.
